

Kemet

Kemet Dressing Ring

Keeping lapping plates flat is essential for component flatness. Once a plate goes out of flat, it needs to be corrected as quickly as possible.

Traditional methods involved using abrasive powder and adjusting the positioning of the conditioning rings. However this procedure is slow, and plates that are greatly out of flat can take many hours to correct.

Kemet has developed the next generation of Dressing Ring for rapid correction of plates that have gone out of flat. Up to 10 times faster than conventional methods, the Kemet Dressing Ring can correct plate flatness problems in minutes rather than hours.

Kemet also offer a reconditioning service for refacing the Dressing Ring once they become worn. Alternatively, a ring reface kit can be supplied.

Description	Code
Kemet Dressing Ring for Kemet 15" Lapping Machine	360752
